The IVA-2 CPT combines the Integrated Visual and Auditory CPT with free online resources. The IVA-2 CPT is a psychological test that helps clinicians evaluate both attention and performance. The Conners' Continuous Performance Test is an attention test for research and clinical purposes. The IVA CPT integrates visual and auditory stimuli, allowing for a comprehensive assessment of cognitive function.

The Auditory Continuous Performance Test (ACPT) helps screen children for auditory attention deficits. It includes an Examiner's Manual, a Test CD, and 12 Record Forms.

A complete and current Diagnostic and Statistical Manual of Mental Disorders (DSM-5) is available for integration with the IVA CPT. This manual includes both integrated visual and auditory continuous performance tests for clinical use. The IVA CPT and ACPT are validated with fMRI and are used in research settings.

A continuous performance test (CPT) is a neuropsychological test that assesses various aspects of cognitive function, including attention, vigilance, and cognitive flexibility. The IVA CPT includes subtests to evaluate auditory and visual processing, auditory and visual continuous performance, and the subtest that requires participants to understand test instructions correctly. Furthermore, test battery results are used to evaluate the integrated visual and auditory continuous performance of participants.

Evaluation through the Integrated Visual and Auditory Continuous Performance Test (IVA) is important for understanding cognitive function in adults. Objective: Our objective was to present normative data from 70-year-olds on the Integrated Visual and Auditory Continuous Performance Test (IVA).
